OVERVIEW

Windcombe is a quiet, family-friendly neighborhood in Indianapolis, known for its scenic, tree-lined streets. Residents appreciate its convenient location and welcoming atmosphere, creating a strong sense of community.

For this project, I redesigned the existing website to improve its overall look and usability, while also developing a cohesive brand identity for the neighborhood.

History of Windcombe

Windcombe began as a small suburban development and has grown into a peaceful, close-knit neighborhood where neighbors take pride in their community.

As the neighborhood evolved, so did the sense of community that defines Windcombe today. Local parks, walking paths, and small gathering spots became places where neighbors would meet, chat, and share stories about their lives.

Over the years, residents have organized block parties, holiday decorating events, and neighborhood clean-ups. These gatherings have strengthened the bonds between residents, creating a sense of belonging and shared responsibility.

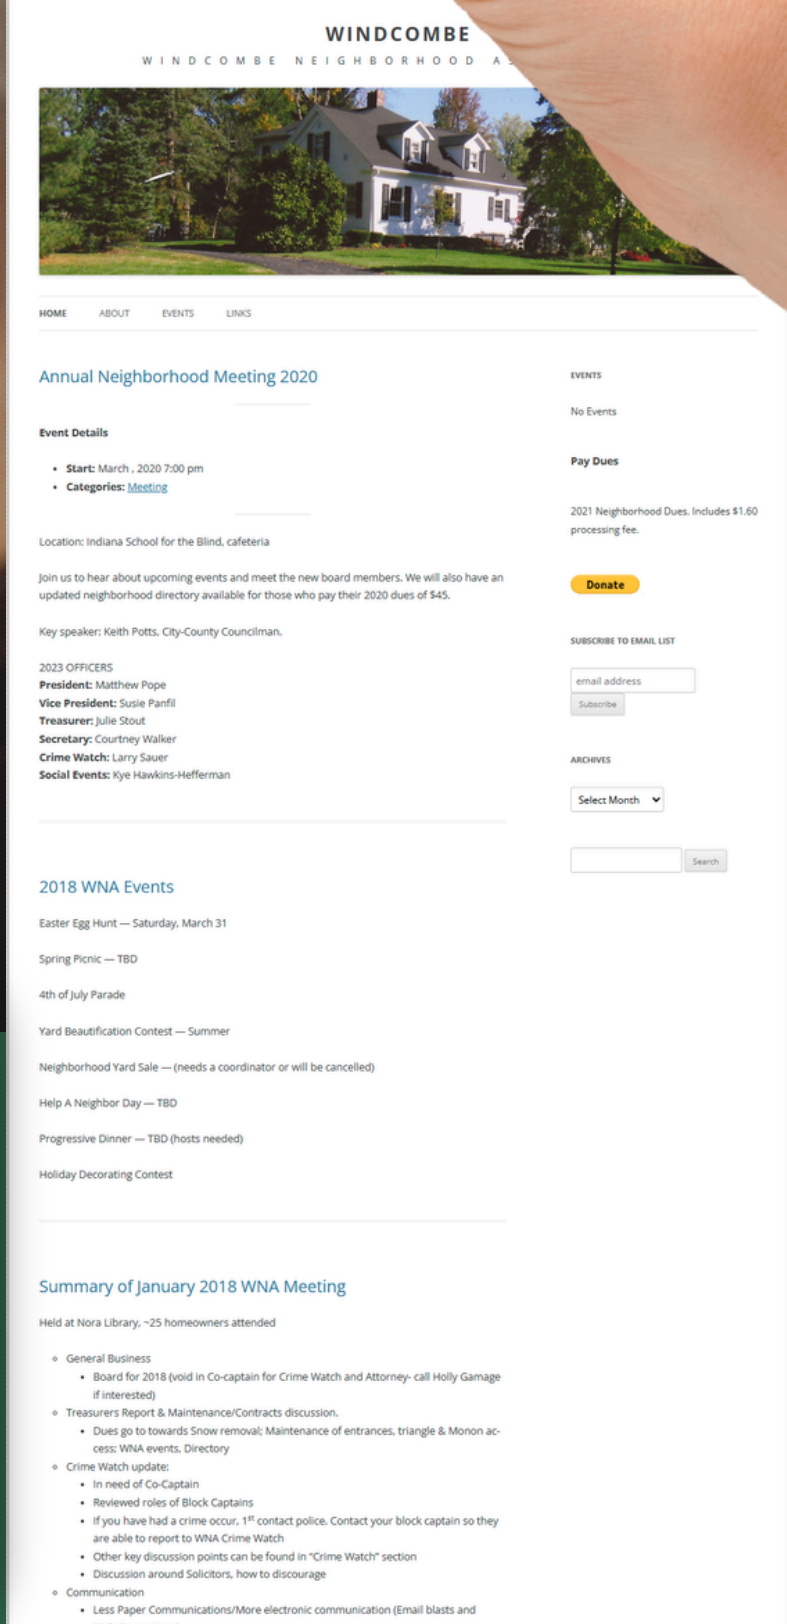

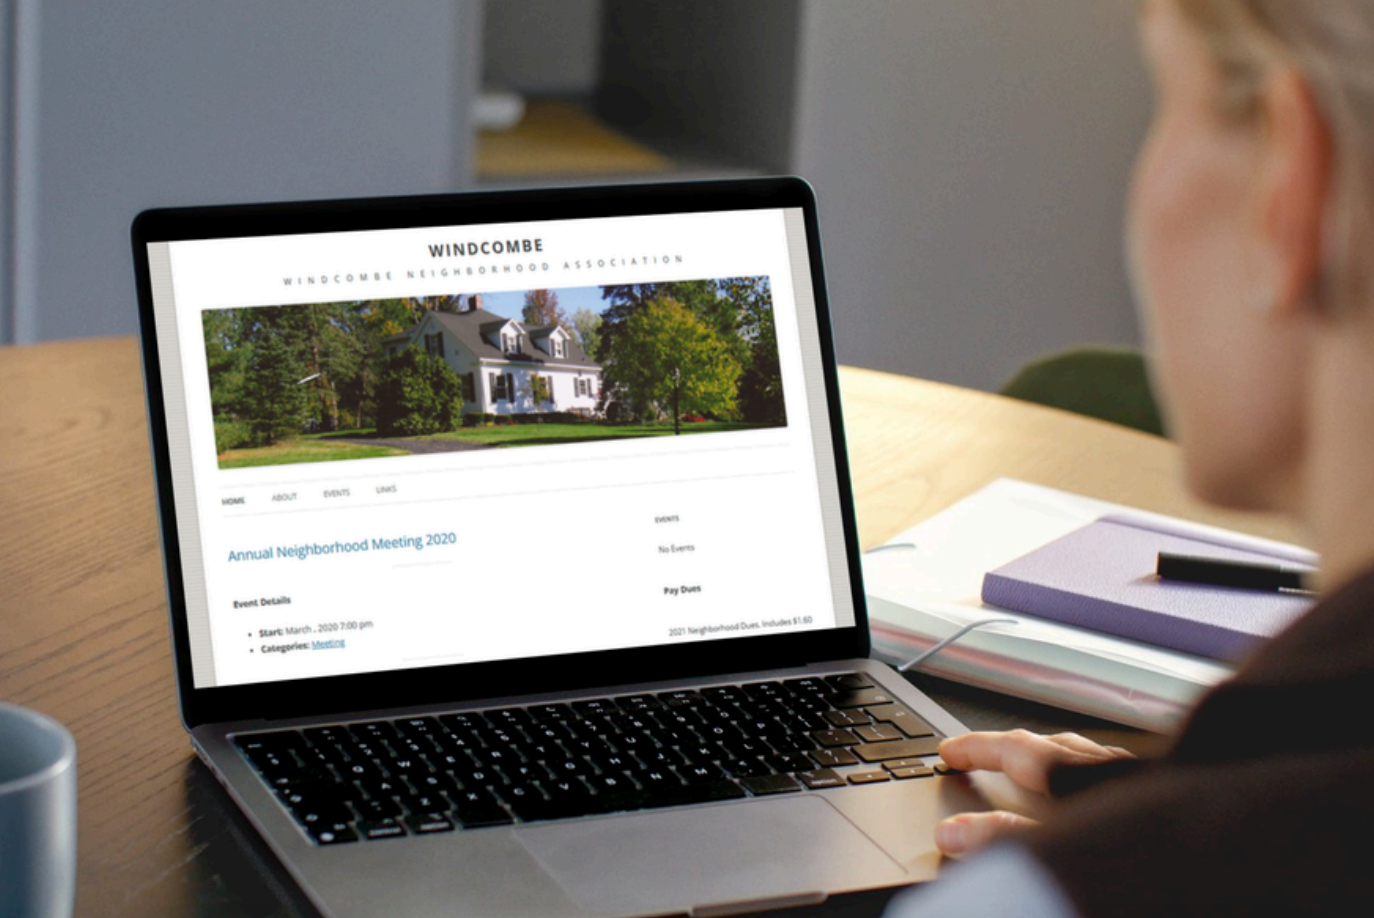

I developed multiple custom WordPress pages to organize announcements, events, and neighborhood resources in a clear, easy-to-navigate structure. Implemented individual user account logins to give residents secure access to community features.

I also built a community board where residents can create posts, share updates, and interact with one another, encouraging engagement within the neighborhood. Integrated a map feature that allows users to view where residents are located, helping visualize the community and strengthen connections.

Configured the backend to keep content management simple and intuitive, making it easy for administrators to update pages, manage users, and maintain the site long-term.

The original Windcombe Neighborhood Association website lacked clear structure and usability, making it difficult for residents to find important information. Navigation was limited, with content scattered across pages and no clear hierarchy.

The site did not support user interaction—there were no account logins, community features, or ways for residents to engage with one another. It also lacked visual consistency and modern design elements, which made the experience feel outdated and less inviting.

Overall, the previous site functioned more as a static information page rather than an interactive community hub, highlighting the need for a more organized, user-friendly, and engaging redesign.

Redesigned and developed the Windcombe Neighborhood Association website into a more structured, user-friendly platform focused on community engagement. Organized content into clear, accessible pages for announcements, events, and neighborhood resources, improving overall navigation and usability.

Introduced individual user account logins to give residents secure access to features, along with a community board where users can create posts and interact with one another. Integrated a neighborhood map to help residents visualize where others live and strengthen connections within the community.

Focused on creating a clean, modern design while also configuring an intuitive backend, making it easy for administrators to manage content and maintain the site long-term.
